

# MagePrince Extension Installation Guide

for Magento 2.x

1. Unpack the extension ZIP file on your computer.
2. Connect to your website source folder with FTP/SFTP/SSH client and upload all the files and folders from the extension package to the corresponding root folder of your Magento installation:

Please use the “Merge” upload mode. Do not replace the whole folders, but merge them. This way your FTP/SFTP client will only add new files. This mode is used by default by most of FTP/SFTP clients software. For MacOS it’s recommended to use Transmit. If you install several extensions from Mageprince, they will contain same files from the Base package — feel free to overwrite them, these are system files used by all our extensions.

3. Connect to your Magento directory with SSH.
4. Run 3 following commands:

```
php bin/magento setup:upgrade  
Php bin/magento setup:di:compile  
php bin/magento setup:static-content:deploy
```
